

## Inflatable Night Club – Set up

- Unpack the Night Club from its carry bag.
- Unfold / roll out night club
- Unpack blower fan from tote
- Find intake chute and attach fan
- Just above the chute is a deflation zipper, close just the that one for now.
- As the Night club inflates, make sure the deflation zipper on the other side of the fan is still open, this will help with getting the lights hung on the roof.

### **DO NOT TRY AND INSTALL LIGHTS or PULL-ON ROOF IF FULLY INFLATED.**

- Install lights as shown in the pictures provided.
- Once all the lights have been installed close the open deflation zipper that was left open.
- Once fully inflated Using the stakes provided make sure that the main four corners and the entrance door is staked in the ground. There are additional securement available with rope provided (windy conditions).
- Now plug everything in in the provided access area in the middle of the back wall on ground.

If the weather gets to windy, please turn off fan and open deflations zippers.

To pack-up and tear down follow the steps in reverse order.

Be sure to get all the air out of the nightclub before trying to roll it up.

Be sure that the night club is not wet or damp when packing up, this will cause mold to grow.
